ePartners

Dear EH,

Welcome to the new look for **e!**
Because **BLUE** is the new green.
Everything eAir and eData have to offer
you involves green! Read on for more
details and see if **BLUE** is the new you.

eAir

SAVE

Green is the newest environmental buzz word. **Green** infers two meanings:

- Reducing Energy Usage
- Saving Money

First consider **energy consumption**. Energy allows electricity to be generated for powering items needed to produce our goods and services. Being Green is about retraining the thought process and investing more in our planet and our future.

Next, Being Green infers **saving money** in the long run by reducing energy consumption.

REDUCE

Being Green means knowing your carbon (CO₂) footprint and taking steps to balance that with the need to supply goods and services to your customers.

According to the most recent data:

- **Annual CO₂ emissions are at 7 million tons**
- **Individuals contribute 24 tons annually**

While transportation accounts for roughly 33% of energy-related emissions, the Technology Industry is growing in its impact.

Consider these facts:

- **Data centers use 10-30 times more energy per square foot than office space.**
- **Data center energy usage has been doubling every 5 years**

These are clear indications of the need to **get the right solution now.**
